

GEO Keeps Moving Along

The Internet (2001-06-22)

GEO project development continues on the development site. It is possible that a GEO v2.00 initial release could happen as early as the end of 2001. GEO's database continues to grow, with over 7,700 entries currently available to the public. GEO developers are continuing to look at ways to improve the site as both v2.00 initial release gets closer to being completed, and as v3alpha looms on the horizon.
